INTRODUCTION

Prerequisite guide for safely powering down your PC before opening it for maintenance or repair.

Step 1 — How to unplug and discharge before repair

- Power down your PC and remove the power cord from the back.

Step 2

- Press and hold the power button for about 10 seconds, then release.
 - ⓘ This helps drain any remaining power stored in the capacitors, so that you can safely work on the internal components.

Now you can start doing repairs on it.
