INTRODUCTION

This guide will show the teardown of a Linksys WAG200G gateway.

TOOLS:

- Phillips #00 Screwdriver (1)
- iFixit Opening Tools (1)
- Small Chain Nose Pliers (1)

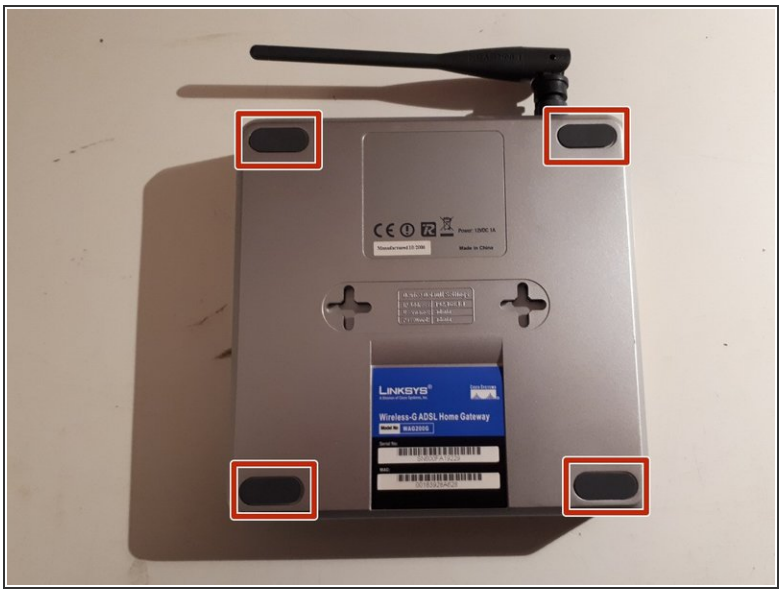
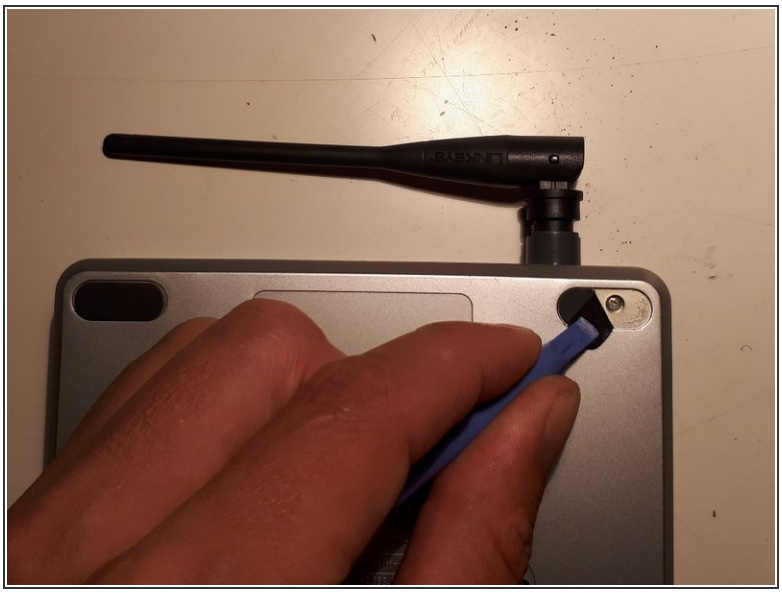
Step 1 — open up the router





- Turn the router with the bottom facing upwards and locate the 4 feet.
- Use your nails or the opening tool to pry away each foot to reveal a screw, and unscrew each one.
- The front of the case can be disconnected from the backside now.

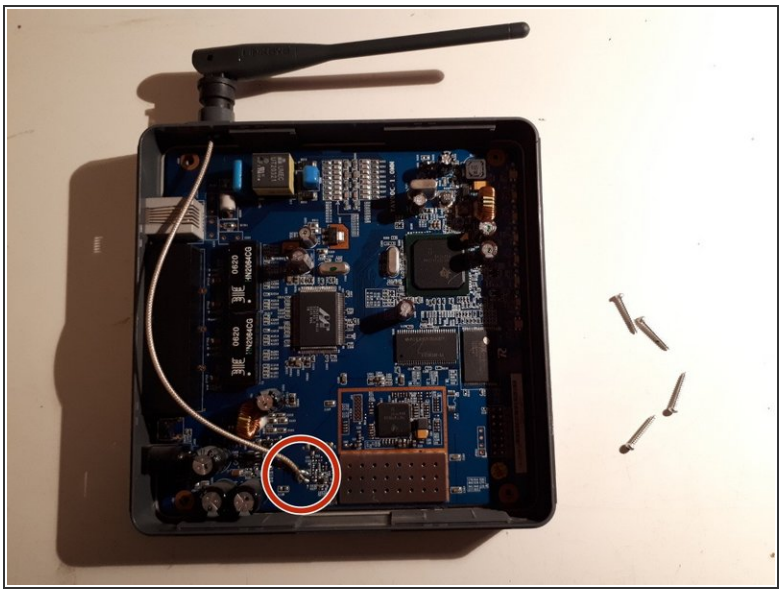
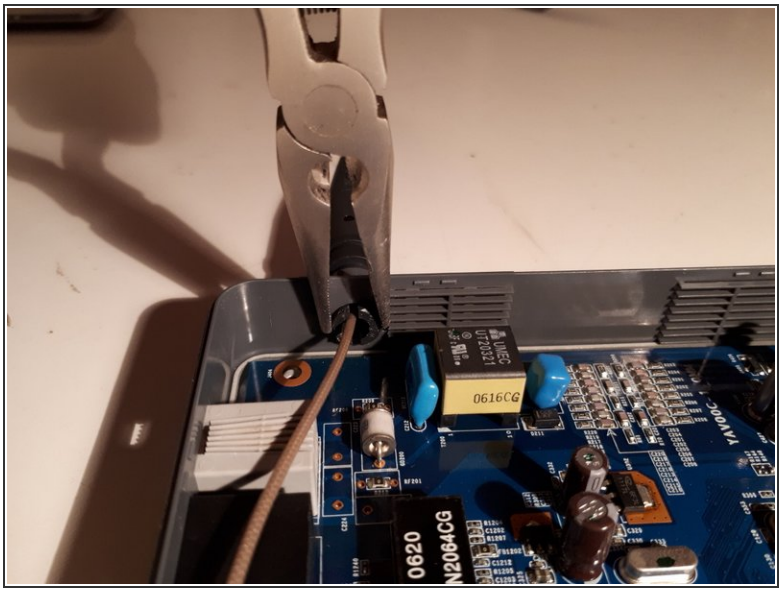
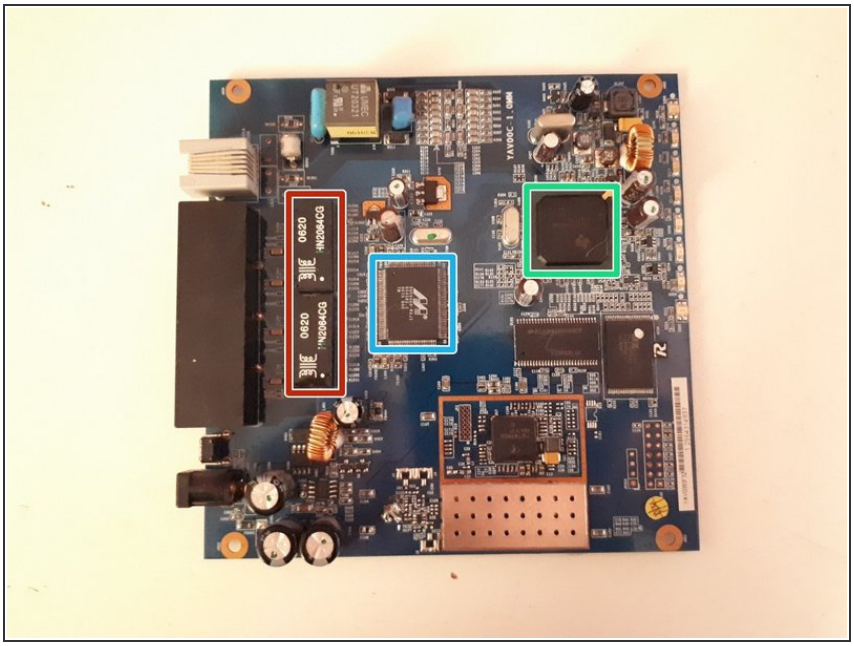
Step 2 — remove the antenna





- The antenna cable is soldered to the board. It can be unsoldered or just cut.
- Use the pliers to make the underside of the antenna smaller so it can fit through the case hole, and at the same time, pull the antenna itself.

Step 3 — remove the board from the case



- The board can now be removed from the case easily.
  - 10/100 Base-T Dual Port Transformer: HN2064CG
  - CPU: TNETD7200ZDW
  - 10/100 Ethernet Switch : 88E6060-RCJ1
