INTRODUCTION

If your computer won't charge and you have already ruled out a defunct charger, you can try replacing the power jack using these steps.
🔧 TOOLS:

- iFixit Opening Tools (1)
- Phillips #0 Screwdriver (1)

Step 1 — Backplate

● Remove battery by pushing the two buttons inward.

Step 2

● Remove the two rubber feet next to the battery.

This document was generated on 2020-11-28 07:05:43 AM (MST).
Step 3

- Remove all 14 Phillips head #0 screws.

Step 4

- Use a plastic opener tool to pry off the black backplate.
Step 5 — DC Power Jack

- Remove the black tape near the power jack.

- Remove the screws connecting monitor to the bottom of the computer.

Step 6

- Position the metal fittings attached to the monitor out of the way.

⚠ The monitor is still attached by wires — be careful not to pull on it too hard.

Step 7

- Disconnect the power jack from the motherboard.

- Remove the power jack by lifting it up.

- ⓘ An opener tool may make this easier.

To reassemble your device, follow these instructions in reverse order.
