INTRODUCTION

To replace the Satellite L755 motherboard you will need a Phillips (PH0) screwdriver. The motherboard is fragile and should not be bent or pried away from other parts or forced into place since it may break.
🔧 TOOLS:

- Phillips #0 Screwdriver (1)

Step 1 — Keyboard

- Unsnap and remove the bar above the keyboard.

Step 2

- Unscrew the four 4mm Phillips #0 screws beneath the bar.

Step 3

- Pull keyboard up and partially out.
- Detach conductor ribbon.
- Slide keyboard out completely.

Step 4 — Disk Drive

- Remove the seven 4mm Phillips #0 screws beneath the keyboard.
- After the screws are removed, remove the face plate to reveal the motherboard.

Step 5

- Lift up the flap and there will be two 2 mm Phillips screws beneath that will need to be unscrewed to pull the disk drive out.

Step 6

- Now the disk drive will be able to be removed from the motherboard by sliding the drive to the right.
Step 7 — Motherboard and Fan

- Carefully remove the 2 conductor ribbons.

- ⚠️ Do not tear the yellow tape covering the upper conductor ribbon if possible.

- ⓘ The lower right ribbon may be removed at either the left or right ends by flipping up the black tab.

Step 8

- Remove the indicated conduit by gently pulling it away from the motherboard.

Step 9

- ● Remove the 5mm Phillips #0 screw in the middle of the motherboard, and the 4mm Phillips #0 screw on the upper left near the fan.

- ● Remove the four 4mm Phillips #0 screws under the edge covering flaps.

- ● Carefully lift out the motherboard and fan.

- ● To detach the fan, remove the two 2mm Phillips #0 screws.

To reassemble your device, follow these instructions in reverse order.
