

# iPad Mini CDMA Wi-Fi/Bluetooth Antenna Replacement

Prereq only (for speaker), does not remove antenna, battery is in.

Written By: Walter Galan

---

## INTRODUCTION

Prereq only, does not remove antenna, battery is in.

---

### TOOLS:

- [Phillips #00 Screwdriver](#) (1)
  - [Spudger](#) (1)
-

## Step 1 — Wi-Fi/Bluetooth Antenna

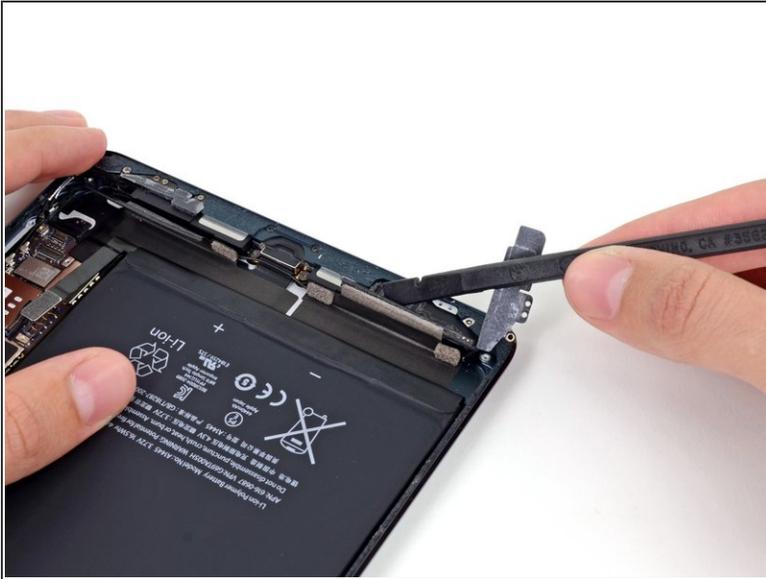

- Remove the following three screws securing the bottom left antenna to the rear case:
  - One 1.2 mm Phillips #00
  - One 1.1 mm Phillips #00
  - One 2.5 mm Phillips #00

## Step 2

- Use the flat end of a spudger to loosen the foam adhesive securing the Wi-Fi antenna to the left speaker.

## Step 3

- Use the flat end of a spudger to fold the left-hand wide piece of tape away from the left speaker.

## Step 4

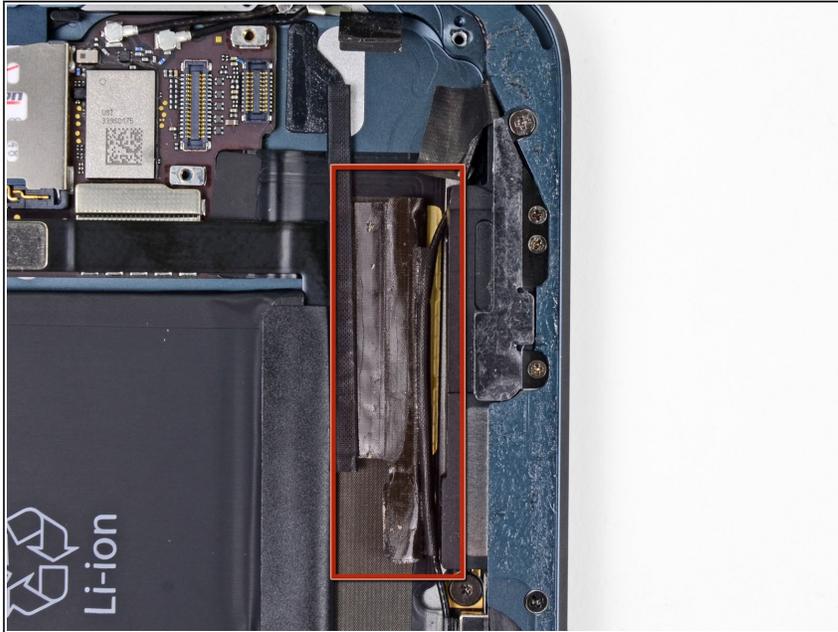

- ★ The antenna cable is secured with two pieces of tape: the wide tape that continues onto the rear case, and its own small piece of tape that is covered by the wide tape.
- i In the next steps you'll be separating the wide tape from the antenna cable's tape with the tip of a spudger in the gap between the two pieces.

## Step 5

- Pull the wide tape toward the top of the iPad, applying constant force to release it from the antenna cable between it and the speaker.
- Slide the tip of a spudger through the gap between the wide tape and the antenna cable, to break the adhesive connecting the two.
- Continue pulling the wide tape until it is no longer covering the antenna cable.

## Step 6

- The right-hand wide piece of tape covers the antenna cable in the same way as the left.

## Step 7

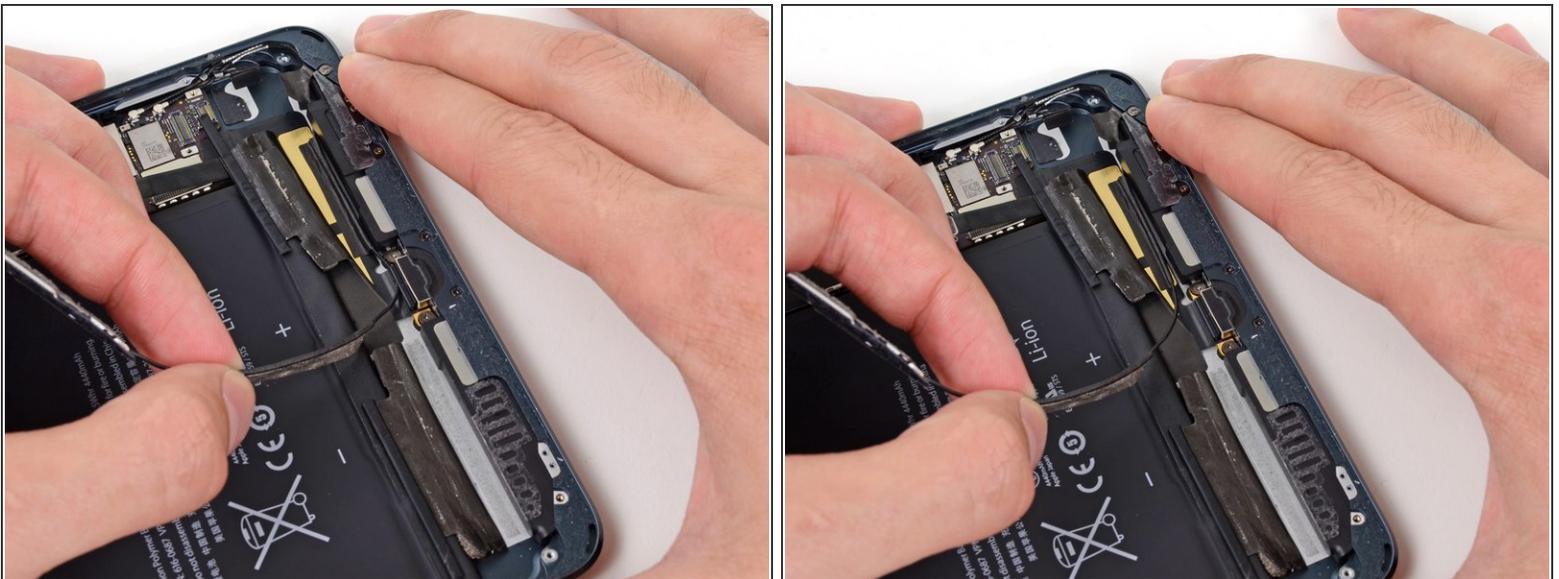

- Pull the wide tape toward the top of the iPad, applying constant force to release it from the antenna cable between it and the speaker.
- Slide the tip of a spudger through the gap between the wide tape and the antenna cable, to release the adhesive connecting the two.
- Continue pulling the wide tape until it is no longer covering the antenna cable.

## Step 8

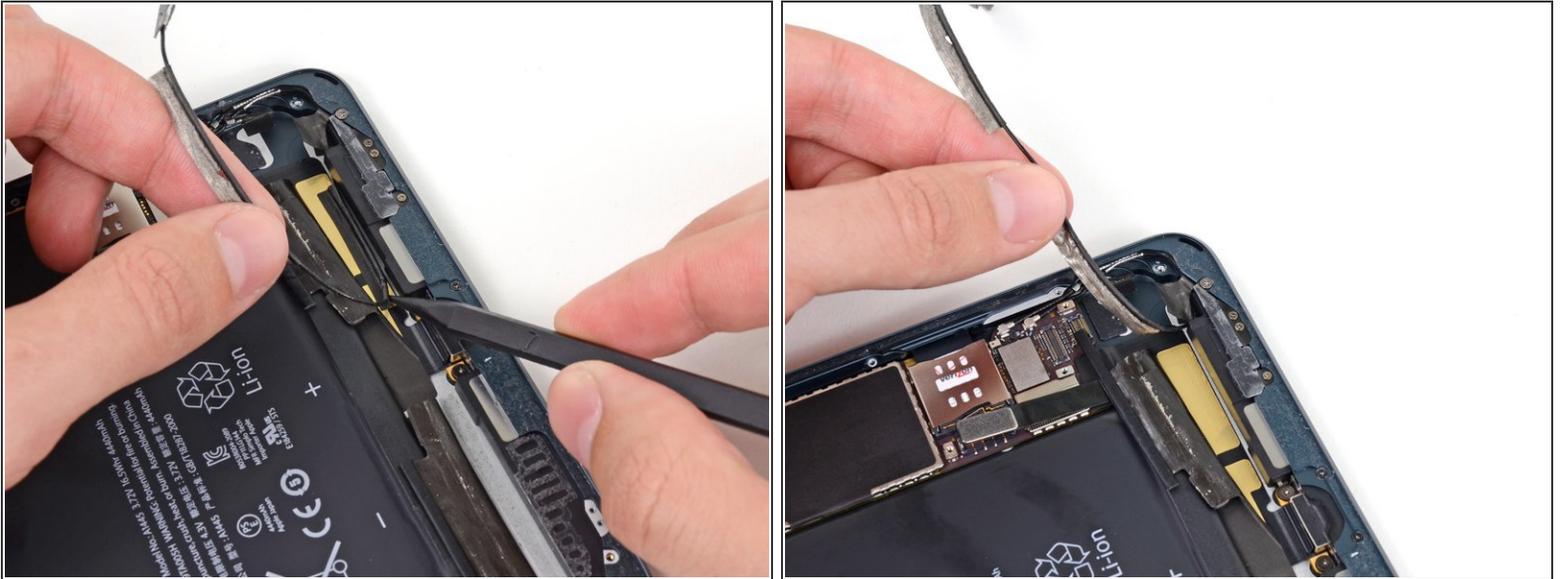

- Use the tip of a spudger to pry the antenna cable tape up from the rear case of the iPad.
- Gently pull the antenna cable out of the way as you work along the piece of tape, to keep it from resealing.

## Step 9

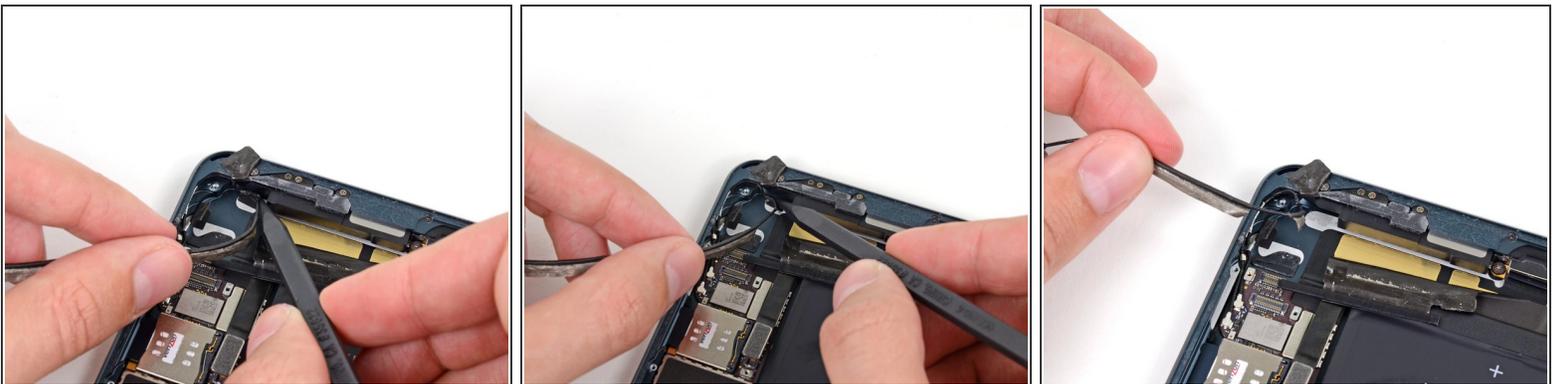

- Pull the antenna cable from the slot behind the Lightning connector.

## Step 10

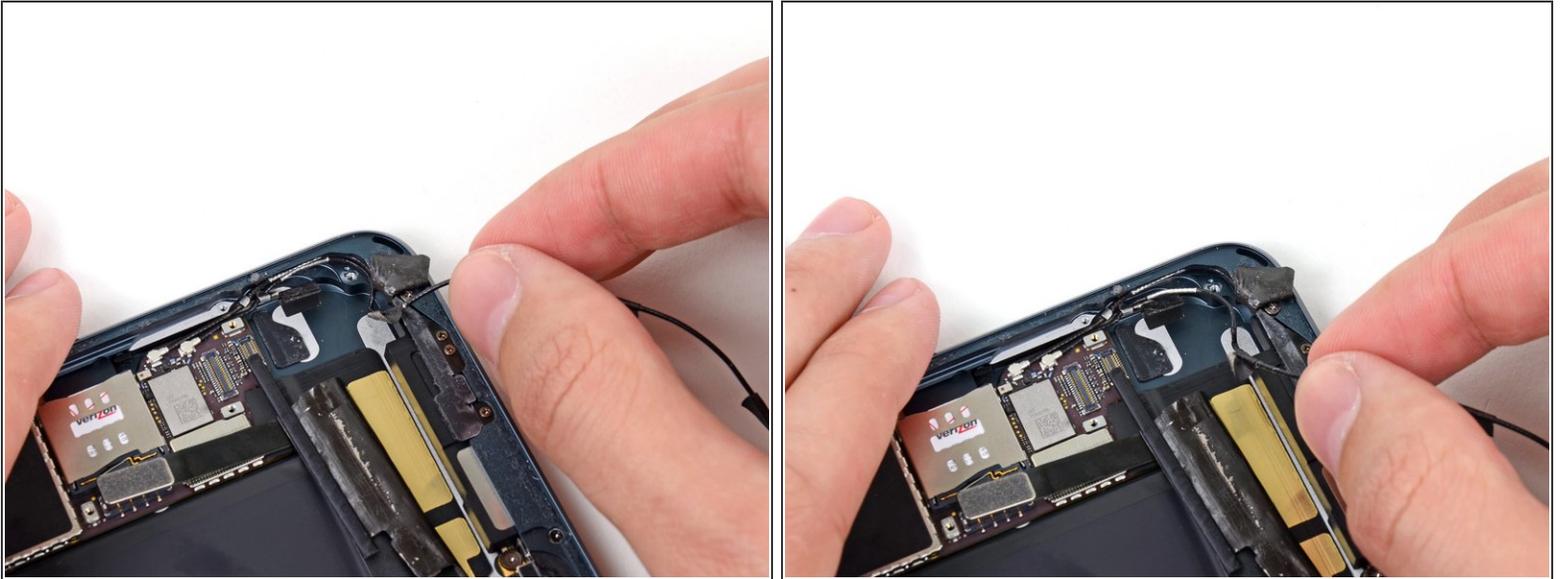

- Use the tip of the spudger to pry the antenna cable tape up from behind the right speaker as well.

## Step 11

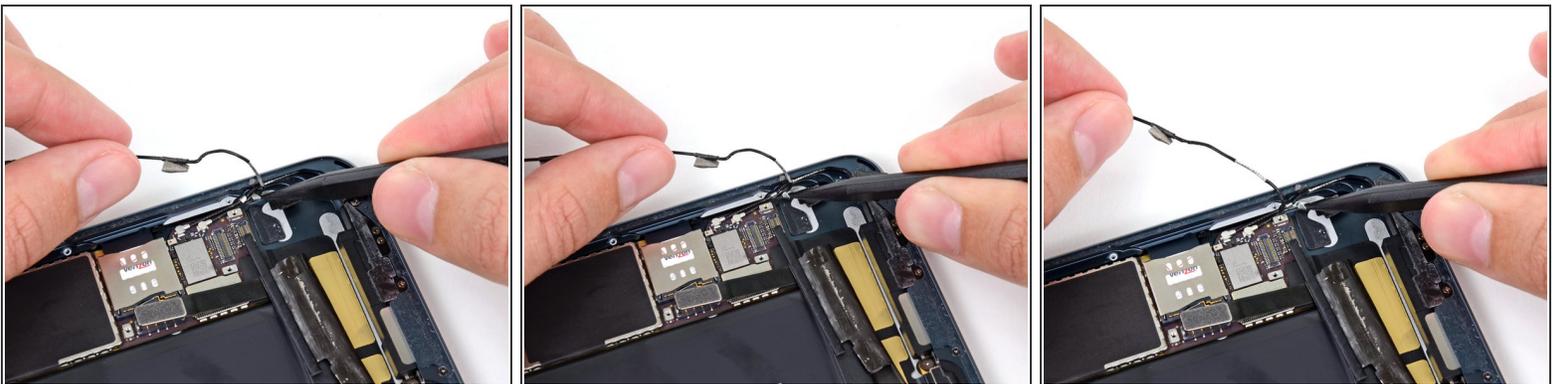

- Use the tip of a spudger to remove the small piece of tape securing the antenna cable in the bottom right corner of the iPad.

## Step 12

- Pull the antenna cable away from its recess in the rear case.

## Step 13

- Use the tip of a spudger to pry the small metal retaining clip off the antenna cable.
- De-route the antenna cable from the clip.

To reassemble your device, follow these instructions in reverse order.
