TOOLS:

- Phillips #0 Screwdriver (1)
- iFixit Opening Tools (1)

PARTS:

- PC3-8500 4 GB RAM Chip (1)

Step 1 — Battery

- Flip your laptop over.

- Unplug all cables from the computer. If you're just swapping the battery, you can leave the power cord plugged in.
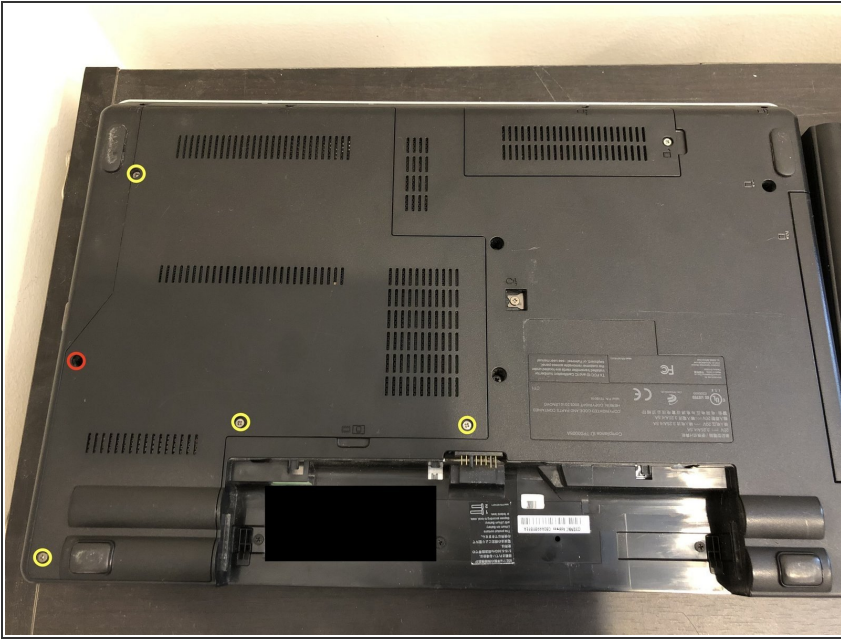

Step 2 — Battery

- Pull the locking tab on the battery towards the unlock position.

- Pull the battery out of the socket.

Step 3 — Bottom Cover

- Loosen the following five screws:

- 5 Phillips #0 screws

- 1 recessed Phillips #0 screw

- ⓘ These screws do not come out all the way, and need to be un-tightened a lot more than you might think.

Step 4 — Bottom Cover

- Pull up on the front cover from the left and right sides.

- ⓘ Do not force the cover off the laptop. If it does not want to come out, undo the screws a bit more.

Step 5 — RAM

- Pull the two tabs on the sides of the RAM.

- Repeat on the second stick.

⚠️ Do not touch the gold contacts on the RAM, because that could easily damage the RAM.

To reassemble your device, follow these instructions in reverse order.
