

UTStarcom XV6700 Camera Replacement

A small amount of disassembly is required to...

Written By: Jesse Walker

INTRODUCTION

A small amount of disassembly is required to replace the camera. The beginner can complete this task with just a couple tools.

TOOLS:

Phillips #00 Screwdriver (1)

Spudger (1)

Tweezers (1)

Step 1 — Battery

- Press the on/off button on the top to power the phone off.

Step 2

- Remove the battery cover by pressing and sliding the cover down and off of the phone.

Step 3

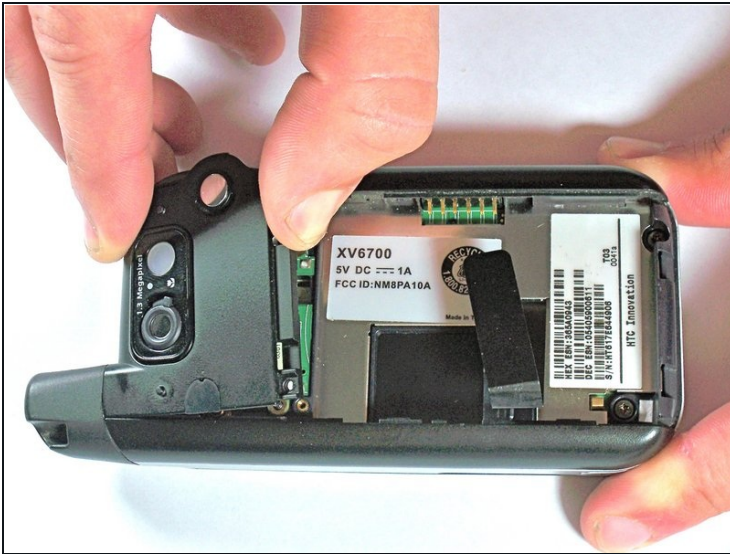

- Pull the battery removal tab and lift the battery out of the phone.
- ⓘ If the battery removal tab is missing, place a spudger on the opposite side of the highlighted connector and pry the battery up.

Step 4 — Camera

- Remove the two 4.0-mm #000 Phillips screws at the top of the battery compartment. Tweezers may be useful to remove the screws.

Step 5

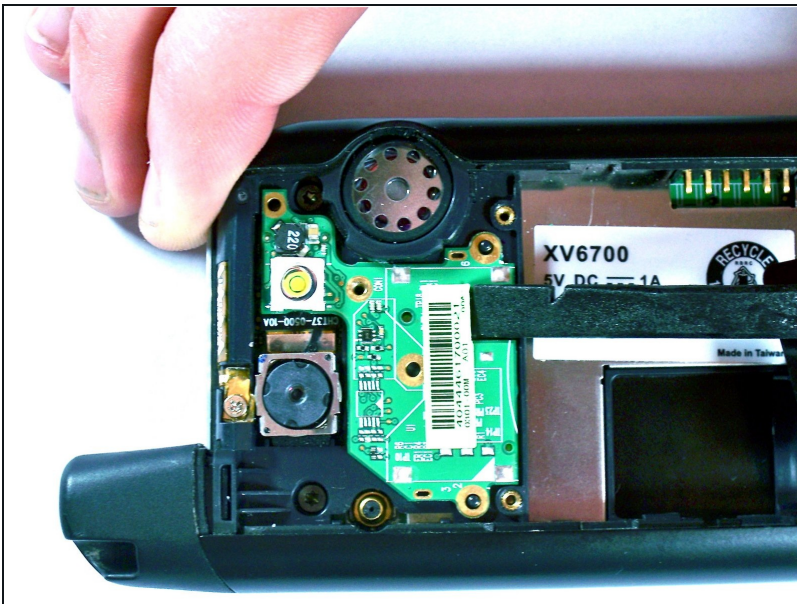

- Use firm pressure to carefully pry off the cover with your fingers.

Step 6

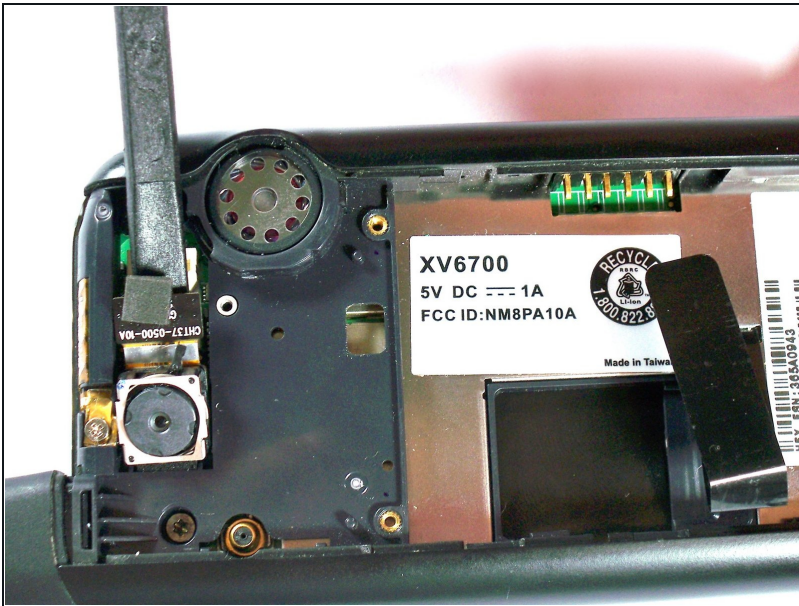

- Remove the 4.0-mm #00 Phillips screw securing the camera flash circuit board. The board is still connected by a connector on the bottom of the board.

Step 7

- Gently pry off the camera flash circuit board with the spudger.

Step 8

- Gently pry off the camera with the spudger.

To reassemble your device, follow these instructions in reverse order.
