INTRODUCTION

This guide is an internal prerequisite and should remain unpublished.
⚙ TOOLS:

- T10 Torx Screwdriver (1)
- Spudger (1)

www.iFixit.com

Step 1 — Optical Drive

- Pull the optical drive thermal sensor connector straight away from its socket on the logic board.
Step 2

- Remove the four 9 mm T10 Torx screws securing the optical drive to the outer case.

Step 3

- Lift the inner edge of the optical drive and maneuver its connector past the frame attached to the logic board.

- Carefully pull the optical drive off its mounting pins on the edge of the outer case to gain clearance for disconnecting the optical drive cable.

Step 4

- Use the flat end of a spudger to help disconnect the optical drive cable.

To reassemble your device, follow these instructions in reverse order.
