

Samsung Galaxy S5 Motherboard Assembly Replacement

Prereq to remove the motherboard from the interior midframe

Written By: Sam Goldheart

INTRODUCTION

Prereq to remove the motherboard from the interior midframe.

TOOLS:Spudger (1)

Step 1 — Motherboard Assembly

- Carefully wedge the tip of a spudger underneath the antenna cable connector.
- Delicately lift the spudger directly upwards to disconnect the antenna connector off its socket on the motherboard.
- (i) Some models have two antenna cables (blue and grey/white). Remove both of the cables.

Step 2

This document was generated on 2020-11-14 06:17:29 AM (MST).

Remove the single 3.0 mm Phillips #000 screw securing the motherboard to the midframe.

Step 3

- Pull, but do **not** remove, the camera end of the motherboard up from the midframe to allow access to the connectors on the rear.
- Do **not** attempt to fully remove the motherboard as it is still attached to the interior midframe by the Micro-USB port daughterboard connector.

Step 4

 Use the flat end of a spudger to pry the daughterboard connector straight up off its socket on the motherboard.

To reassemble your device, follow these instructions in reverse order.
