INTRODUCTION

Replacing the optical drive is straight forward and all you need is a Phillips head screw driver. Use this guide to replace the optical drive in your Mac Pro.

🔧 TOOLS:

- Phillips #1 Screwdriver (1)

Step 1 — Optical Drive

- Lift the lever to unlock the case

Step 2

- Remove the side panel of the Mac Pro

Step 3

- Firmly grasp the handles of the shown compartment and pull out firmly to remove the optical drive bay.
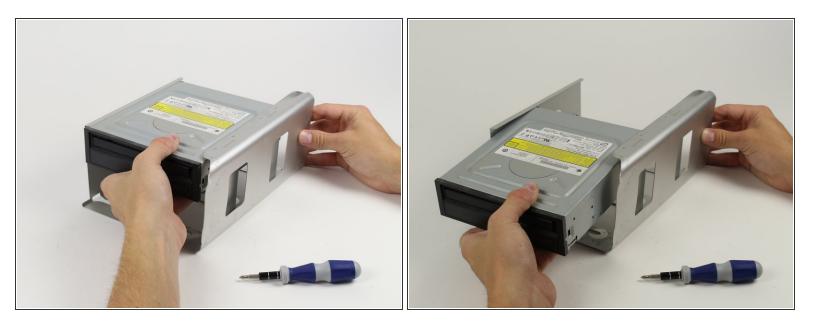

Step 4

- Firmly hold each of the two connectors and pull them out of their respective sockets.

Step 5

- Unscrew the shown two 6-32 type screws on each side of the optical drive.

Step 6

- Firmly grasp the optical drive and pull it out of its enclosure.

To reassemble your device, follow these instructions in reverse order.
