

MacBook Pro 17" Unibody Hard Drive Replacement

Written By: Andrew Bookholt

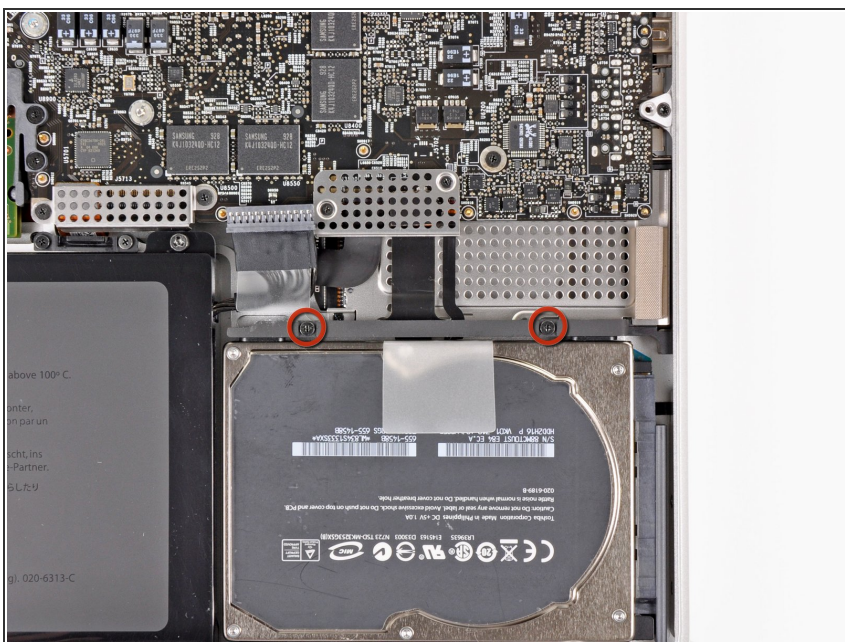

TOOLS:

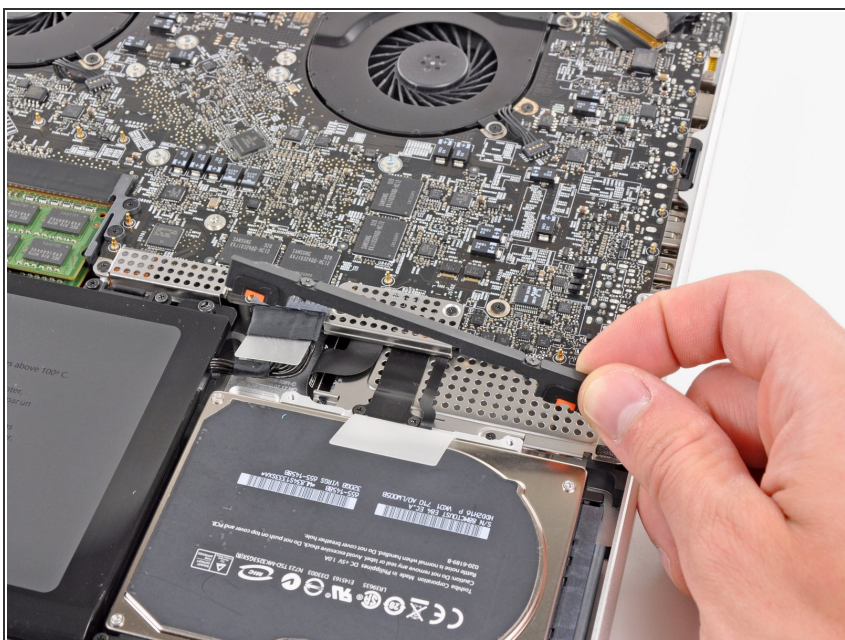

- [Phillips #00 Screwdriver](#) (1)
-

Step 1 — Hard Drive

- Remove the two Phillips screws securing the hard drive bracket to the upper case.
- ⓘ These screws are captive to the hard drive bracket.

Step 2

- Remove the hard drive bracket from the upper case.

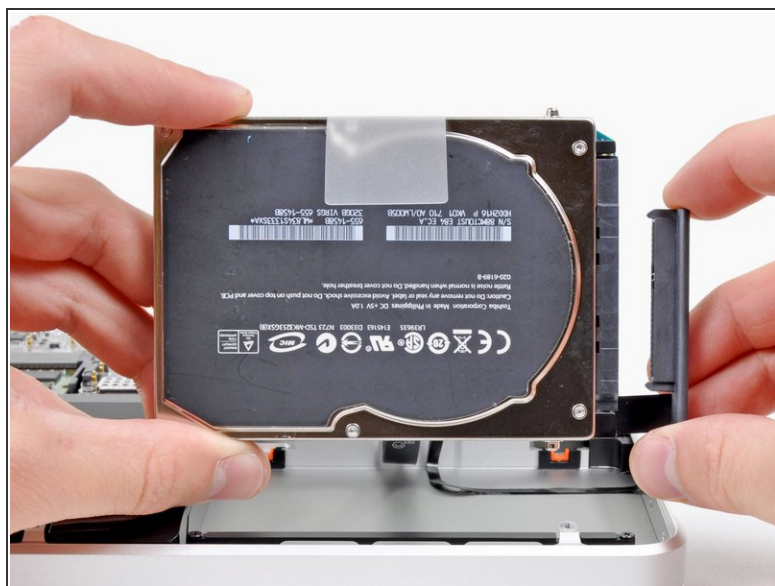

Step 3

- Use the hard drive's pull tab to lift it out of the upper case.

 Don't try to completely remove the hard drive just yet! Its cable is still connected.

Step 4

- Pull the hard drive connector away from the body of the hard drive.
- Remove the hard drive from your MacBook Pro.

To reassemble your device, follow these instructions in reverse order.
