

Disassembling TomTom One XL Back Panel

Remove the TOMTOM XL back panel to get to other components such as the speaker, battery, LCD Screen, and Power/Reset Button.

Written By: DeVhan

INTRODUCTION

This guide will show you how to partially disassemble the TomTom One XL.

TOOLS:

- T8 Torx Screwdriver (1)
- Spudger (1)
- Tweezers (1)

Step 1 — Back Panel

Remove the 4 .4mm screws on the back of the device.

Step 2

- Using the palate knife tool, pry the back from the LCD screen. Apply a moderate pressure to separate them.
- i You can rotate TOMTOM XL to make prying back off easier.
- ⚠ Be careful not to injure the two wires connecting the pieces.

Step 3

- After prying both halves apart, they will be connected by two wires.
- Carefully set the two halves next to each other making sure not to stress or damage the wires.

Step 4

- Using the tweezers separate the wires connecting the battery and speaker to the mother board.
- ↑ Be gentle while pulling the wires out, the plugs are easily injured.

To reassemble your device, follow these instructions in reverse order.
