INTRODUCTION

This guide will teach you how to disassemble your TomTom One XL and expose the power button for cleaning or repair.

TOOLS:

- [T6 Torx Screwdriver](#) (1)

PARTS:

- [Replacement Power Button for TomTom One XL](#) (1)

Step 1 — Back Panel

- Remove the 4 .4mm screws on the back of the device.

Step 2

- Using the palate knife tool, pry the back from the LCD screen. Apply a moderate pressure to separate them.
- ⓘ You can rotate TOMTOM XL to make prying back off easier.
- ⚠ Be careful not to injure the two wires connecting the pieces.

Step 3

- After prying both halves apart, they will be connected by two wires.
- Carefully set the two halves next to each other making sure not to stress or damage the wires.

Step 4

- Using the tweezers separate the wires connecting the battery and speaker to the mother board.

⚠ Be gentle while pulling the wires out, the plugs are easily injured.

Step 5 — Power Button

- Using a Torx 6 screwdriver, remove the 4 .5mm screws connecting the motherboard to the screen assembly.

⚠ The motherboard is connected to the screen assembly via a ribbon wire. After removing the screws, be careful not to damage the wire or the port.

Step 6

- Detach the ribbon wire from it's port on the back of the motherboard.

Step 7

- Now the power button is exposed and any obstructions can be easily removed.

i If you want to replace the button it can easily be popped out using your hands.

To reassemble your device, follow these instructions in reverse order.
