

Disassembling Canon PowerShot SD1100 IS

AV port and Logic board

This guide will allow one to remove the av port and logic board from the camera.

Written By: Tyler Grossheim

INTRODUCTION

Use this guide to remove the AV port and logic board.

TOOLS:

- [Phillips #00 Screwdriver](#) (1)
 - [Spudger](#) (1)
 - [Tweezers](#) (1)
-

Step 1 — Front and Rear Cover

- Remove wrist strap and battery.

Step 2

- Remove 2 screws from each side of the camera (4 total, 0.102 in).
 - Remove 2 screws from the bottom on the camera (0.138 in).
- ⚠ Do not mix the 4 side screws with the 2 bottoms ones; they are different sizes.

Step 3

- Gently pull off the front cover.
- ⓘ The plate on the side should come off.
- Gently pull off the back cover.

Step 4

- The cases should now be removed.

Step 5 — LCD screen

- Remove the top-left screw above the LCD screen (0.100 in).
- Remove the C-shaped plate from the side of the LCD screen.

Step 6

- Remove the screw from the top-right of the LCD screen (0.098 in).
- Remove the L-shaped bar from the right of the LCD screen.

Step 7

- Use the spudger to remove the L-shaped bar from the left-side of the LCD screen.

Step 8

- Use tweezers to remove the connector ribbon from the top-left corner above the LCD screen.
- ⚠ Be gentle. This ribbon should stay attached to the screen.

Step 9

- Use a spudger to lift the connector lock (black flap) at the end of the larger LCD connector ribbon on the front side of the camera.
- Use the tweezers to lift this ribbon.
- Use the tweezers to gently peel this ribbon from the one underneath it.

Step 10

- The LCD screen should now be removed.

Step 11 — Flash Assembly

- Remove the screw located on the side of the camera (0.072 in).

Step 12

- Use the spudger to remove the lens ribbon from the circuit board.
- Use the spudger to lift the ribbon.
- ⓘ This ribbon is connected to the lens, but the flash assembly ribbon is underneath it.

Step 13

- Disconnect the flash assembly ribbon.
- ⓘ The flash assembly ribbon is located underneath the lens assembly ribbon.

Step 14

- Remove the flash assembly, which includes the capacitor. If it resists, note the small hook on the right side near the bottom.
- ⚠ Be careful when taking out the capacitor. It could shock you.

Step 15

- The capacitor should now be removed.

Step 16 — Camera Lens

- Remove 4 screws from silver plate (0.106 in).

Step 17

- Use spudger to lift the second lens ribbon.

i Remember the first ribbon was removed while taking out the flash assembly.

Step 18

- Use spudger to carefully lift the LED light off the upper-left corner of the lens.

Step 19

- Remove the lens.

Step 20

- The camera lens should now be removed.

Step 21 — AV port and Logic board

- Remove screw from top-right of logic board (0.102 in).
- Remove screw on the silver plate (0.102 in).

Step 22

- Remove screw from bottom-right of logic board board (0.102 in).

i The tripod connector can now be removed.

Step 23

- Remove screw (0.102 in) from the left side of the logic board.

Step 24

- Using the spudger, disconnect the ribbon cable located on the top of the logic board.

Step 25

- The logic board may now be removed from the frame.

Step 26

- Remove the remaining screw (0.102 in) located on the camera strap piece.
- The camera strap piece and the av port/battery/memory card assembly can now be removed.

Step 27

- This is the final product.

To reassemble your device, follow these instructions in reverse order.
