# HP w2216h Power Button Replacement

This guide will help replace the power button that would turn on/off the monitor.

Written By: Sadeq Taha

# INTRODUCTION

Is your monitor not powering on? Is the power button making a weird clicking noise? You might need to replace the power button.
🔧 TOOLS:

- Metal Spudger (1)

Step 1 — Power Button

⚠️ Do not put the metal spudger between the metal and the glass. It needs to go under the bezel and above the metal.

● Turn monitor so that the screen is facing you.

● Pry the black bezel from above the metal by placing your metal spudger between the bezel and the metal and twisting the tool slightly.

ⓘ The best places to pry are in the lower left and lower right corners of the black bezel.

Step 2

⚠️ Do not pull the screen away to hard, this could snap the power cable.

● Remove the power button from the top of the plastic frame.

Step 3

- Remove the power cable by carefully sliding it out of it's plug.

- Check if there is any tear or fray in the cable.

To reassemble your device, follow these instructions in reverse order.
