INTRODUCTION

Zotac's bare-bones machines ship without RAM or hard drives. You install your own RAM.

Step 1 — Opening your machine

- Zotac uses thumb screws to secure the case. No tools required!

- After you remove the thumb screws, just slide the bottom cover away from you and lift it away.

Step 2 — Insert the RAM

- Your ZBOX has 2 SODIMM RAM slots and supports up to 16 gigabytes of RAM.

- Insert the RAM chips and press them gently down until the metal arms snap into place to secure them.

To reassemble your device, follow these instructions in reverse order.
