

Clevo Sager Eurocom P650RG G Teardown

Laptop teardown. After I did this, the laptop has a random shutdown issue. Not sure if related.

Step 1 — Clevo Sager Eurocom P650RG G Teardown

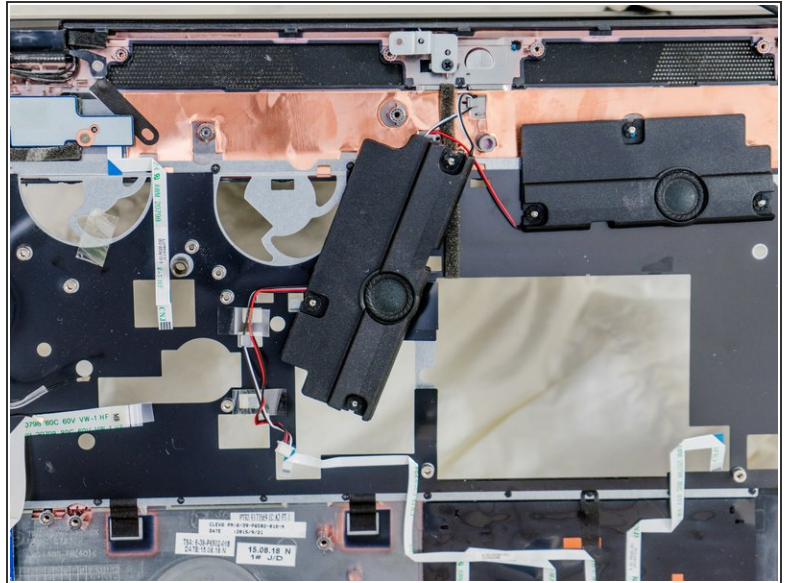

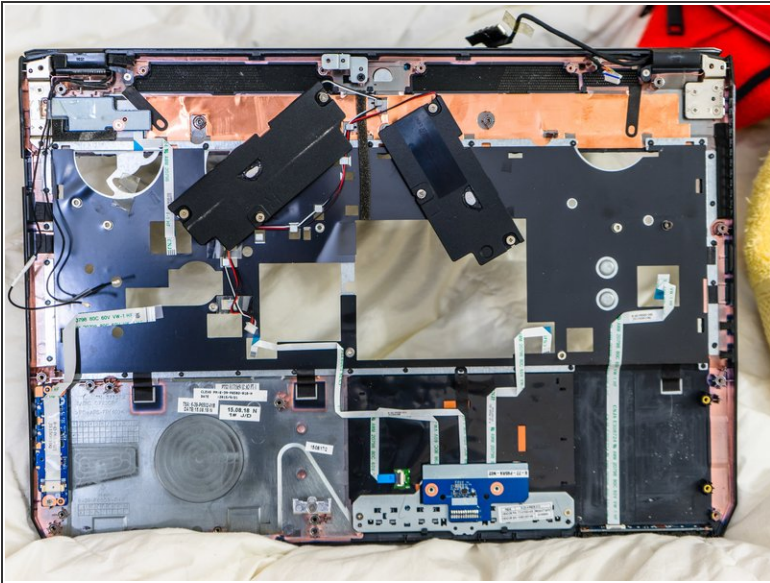

- Not a full teardown; just board photos (both sides) and things that I couldn't find on the Internet easily.

Step 2

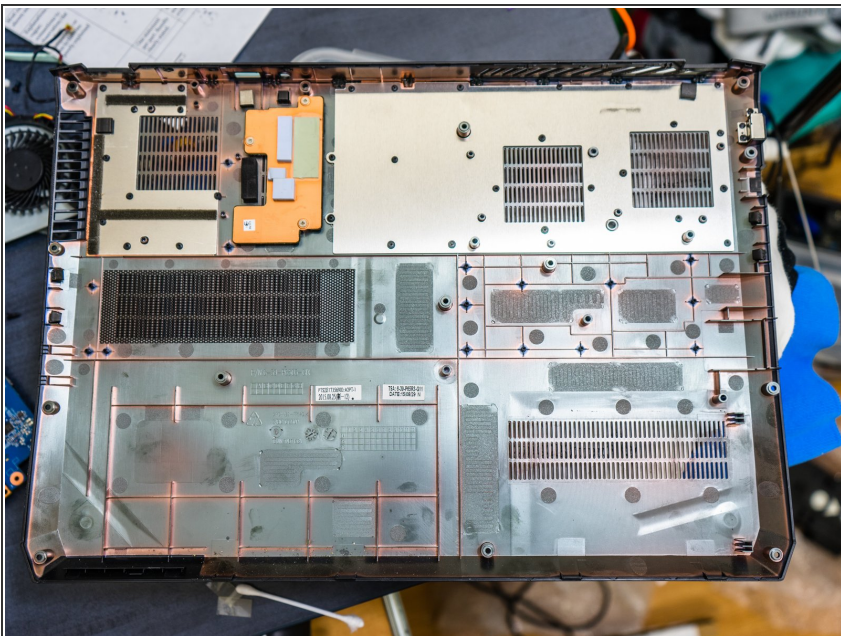

- Internal battery, 60Wh

Step 3

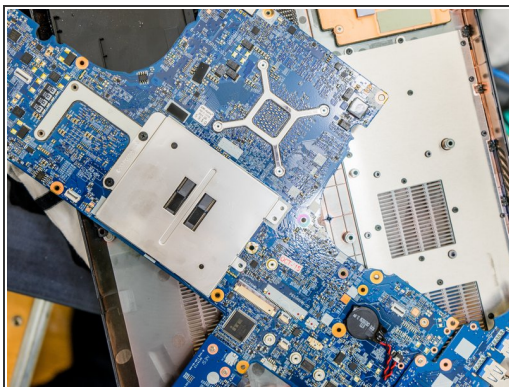

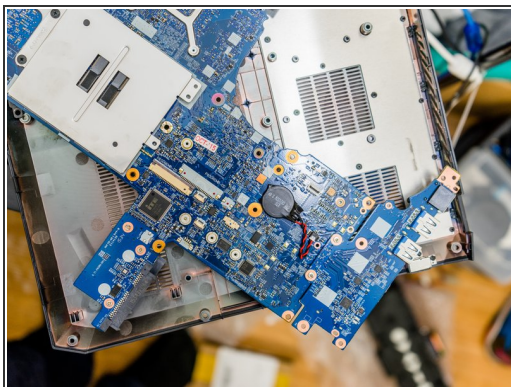

- Top assembly. Screen is attached to top case.
- The two 2W speakers are quite large and sound fairly nice, surprisingly. Doesn't look like they're ported enclosures.

Step 4

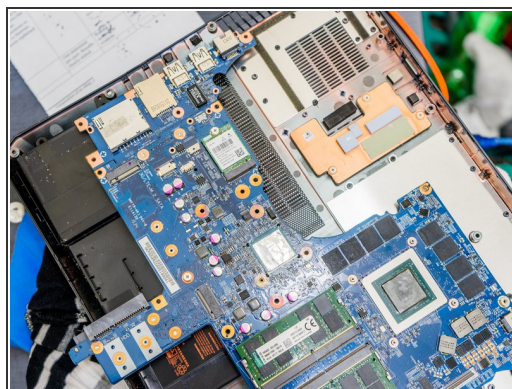

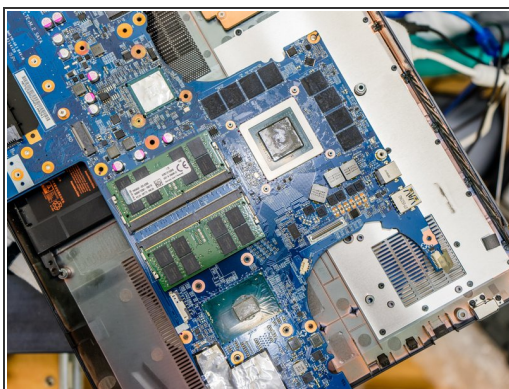

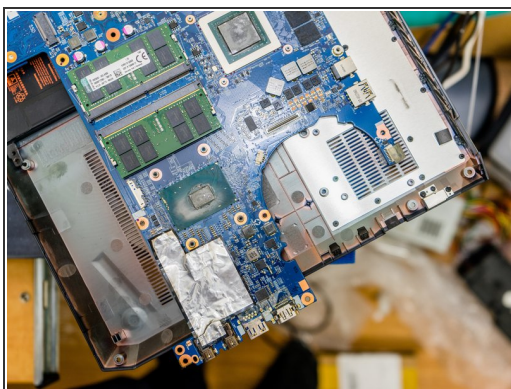

- The copper heatsink is screwed onto the bottom cover. The CPU fan draws air through this area (not a lot though).
- Copper heatsink with heat pads for the CPU and GPU voltage regulator MOSFET/inductors. During reassembly, make sure no wires cover the MOSFETs

Step 5

- Board Photos bottom side

Step 6

- Intel Core i7-6820HQ, DDR4 RAM, GTX980M can be seen here.

To reassemble your device, follow these instructions in reverse order.
