INTRODUCTION

You will need a clean, well-lit area, an iFixit repair kit including the specialized screw driver, along with the Phillips #000 bit. We also recommend you have an organization tray in order to keep track of all the screws you will be taking out.

TOOLS:

- iFixit Opening Tools (1)
- Phillips #000 Screwdriver (1)

Step 7 — LCD Screen

- Once you have the back case off, remove the LCD Screen.

Step 8

- Using a plastic opening tool, gently lift the retaining flap on the display cable ZIF connector.

- Pull the display cable from its socket on the motherboard.

|

Step 9

- Remove the LCD screen from the device.

  ⚠️ Be careful not to rip the display's ribbon cable as you pull the screen away from the device.
Step 10 — Lens

- Remove the four 3.8mm Phillips #000 screws from the LCD frame.

Step 11

- Remove the top left screw, top right screw, bottom left screw, and bottom right screw from LCD frame.

Step 12

- Lift the retaining flaps on the three remaining ZIF connectors connected to the motherboard.

Step 13

- Remove the five 4.3mm Phillips #000 screws from the lens frame to access the lens.

- Remove the lens frame.

Step 14

- Remove two 4.3mm Phillips #000 screws from black plastic piece surrounding the lens.

- Remove the lens.

To reassemble your device, follow these instructions in reverse order.
