INTRODUCTION

Has your computer performance diminished? Try replacing the RAM card.

TOOLS:

- Phillips #1 Screwdriver (1)
- Spudger (1)

PARTS:

- PC3-12800 8 GB RAM Chip (1)

This document was generated on 2020-11-28 05:54:33 AM (MST).

Step 1 — Back Cover
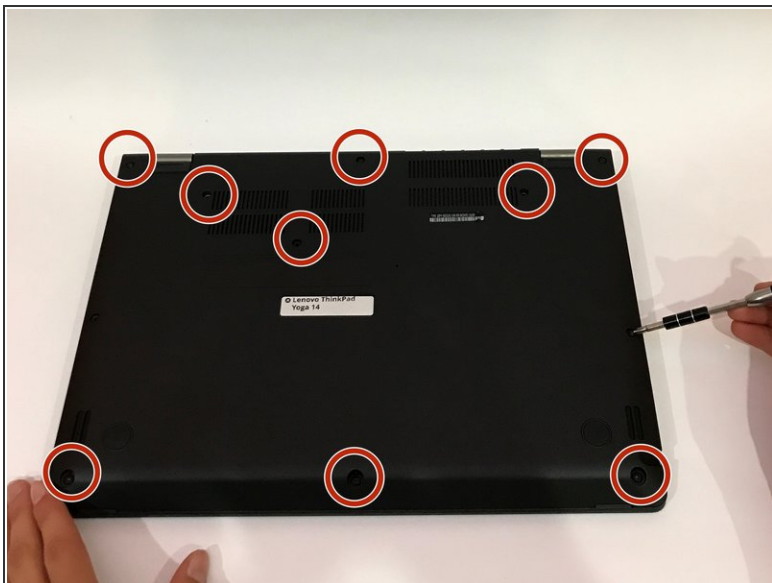

- Remove the indicated nine M2 x 6 mm nylon-coated screws using a Phillips head screwdriver.

ⓘ The screws do not come all the way out. Do not force them out.

Step 2

- After removing all of the screws, gently lift up on all covers to remove the back plate and reveal the interior of the device.

Step 3 — RAM

- The RAM is hidden behind the black piece of plastic. Pull the plastic back.

Step 4

- The RAM is held in place by two metal pieces on both sides.
- Use the spudger to push off both metal pieces to release the RAM.

Step 5

- Take the ram card out of its slot.

To reassemble your device, follow these instructions in reverse order.
