

Samsung 27E510C Back Panel Replacement

This guide will help you remove the back panel of the monitor.

Written By: giggythore

INTRODUCTION

The back panel is the "lid" that covers many of the monitors electrical components. Therefore this is a prerequisite for most of the other repair guides on this device.

TOOLS:

- [Phillips #1 Screwdriver](#) (1)
 - [Heavy-Duty Spudger](#) (1)
-

Step 1 — Back Panel

- Use the #1 Phillips head screw driver to remove each 13.75mm length screw from the rear panel.

i The screw alone with the ports is a different size than the rest, its length is 12mm.

Step 2

- Insert the heavy duty spudger in between the monitors back panel and its frame.
- Use the heavy duty spudger to pry open the back panel.

! Over aggressive prying could break the tabs holding the back panel in place.

To reassemble your device, follow these instructions in reverse order.
